- Data Paper

Data Paper et Data Journal

Rôles et enjeux, freins et leviers pour les différents acteurs

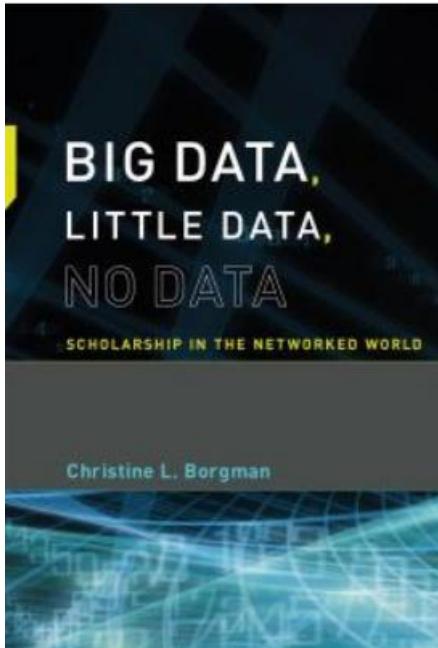

Data sharing – Data Publication ?

ist@inra

Big Data, Little Data, No Data

Scholarship in the Networked World

By Christine L. Borgman

Publier : 3 objectifs

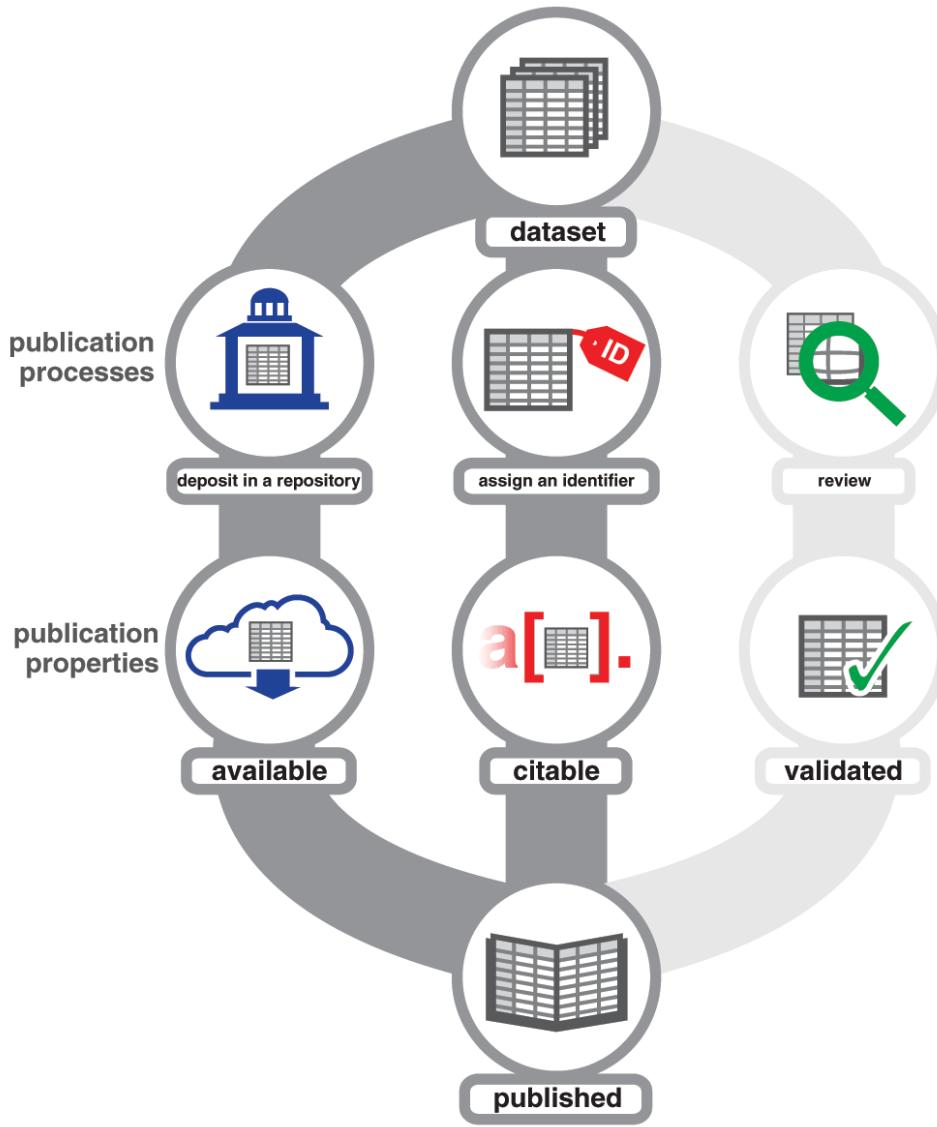

Légitimation	Qualité, confiance → via le Peer Review, citation
Dissémination	Fonction essentielle → assurée par les éditeurs et les auteurs
Accès, préservation, curation	Disponibilité, accessibilité → rôles partagés : auteurs, éditeurs, bibliothèques

« Data Publication » ?

Data by itself has no value.
The value of data lies in their use

ist@inra

Données partagées vs Données publiées

“published” traduit le fait que les données sont **disponibles** au public (car déposées dans un entrepôt) et **citables** (grâce à un identifiant), **validées** par l’existence d’un processus d’évaluation (Peer Review) mais pas toujours...

F1000Research

Kratz J and Strasser C 2014 Data publication consensus and controversies [v2; ref status: indexed, <http://f1000r.es/3hi>]

Detailed Methods

Plasmids and Cell Lines

Sequence verified ORF clones ([Supplementary Table S1](#)) in pDONR223 were recombined into either the Gateway destination vector MSCV-N-Flag-HA-IRES-PURO (LTR-driven expression) or pHAGE-N-Flag-HA (lentiviral vector) using λ recombinase⁹. After packaging in 293T cells, viruses were used to infect the indicated cell lines and selection accomplished using 1 µg/ml puromycin. The pHAGE-N-Flag-HA vector was employed in transient transfections (293T cells, Lipofectamine 2000 (Invitrogen)) for a subset of AIN proteins that were toxic when expressed constitutively from the LTR promoter ([Supplementary Table S1](#)).

Protein Purification

For standard purifications, cells from four 15-cm tissue culture dishes at ~80% confluence (~10⁷ cells) were lysed in a total volume of 4 ml of lysis buffer (50 mM Tris-HCl pH 7.5, 150 mM NaCl, 0.5% Nonidet P40, Roche complete EDTA-free protease inhibitor cocktail) for 1 hour with gentle rocking at 4°C. In some experiments, cells were incubated with 200 nM Torin1³⁷ (a gift from N. Gray, Dana Farber Cancer Institute) for 6 h prior to harvesting. Lysates were cleared using

Part 1. Supplementary Methods

Data Processing and Analysis. Mass spectral data was processed using CompPASS, as previously described¹ with modifications discussed below. Briefly, Sequest summary files were processed into a high threshold dataset based on a 2% protein false-positive rate by keeping the XCorr thresholds for each charge state constant while varying the ΔCn (thresholds: XCorr 2+ ≥ 2.5; XCorr 3+ ≥ 3.2; XCorr 4+ ≥ 3.5; +1 charge states were not collected). These processed data sets were merged for each duplicate run and used to populate a "stats table" consisting of each dataset for the AIN as well as 102 unrelated proteins (Dubs and their selected HCIPs¹; https://harper.hms.harvard.edu/CompPASS_Dubs.html). The D^N-score and Z-score are calculated from total spectral counts (TSCs) for each protein found in association with each bait.

Because CompPASS was originally designed for analysis of mostly non-reciprocal datasets, we devised a new weighted D^N-score (WD^N-score) (Supplementary Fig. S2), which aids in the identification of HCIPs that are associated with multiple baits in a network. WD^N-scores were calculated as:

$$WD_{ij} = \sqrt{(\lambda \omega_j)^p (x_{ij})} \quad (\text{Eq. 1})$$
$$\lambda = \left(\frac{k}{\sum_i f_{ij}} \right), \quad f_{ij} = \begin{cases} 1 & X_{ij} > 0 \\ 0 & X_{ij} \leq 0 \end{cases} \quad (\text{Eq. 2})$$
$$\omega_j = \left(\frac{\sigma_j}{\bar{X}_j} \right), \quad \bar{X}_j = \frac{\sum_{i=1}^k X_{ij}}{k}; \quad n = 1, 2, \dots, m \quad (\text{Eq. 3})$$

X_{ij} = total peptides for interactor j from bait i

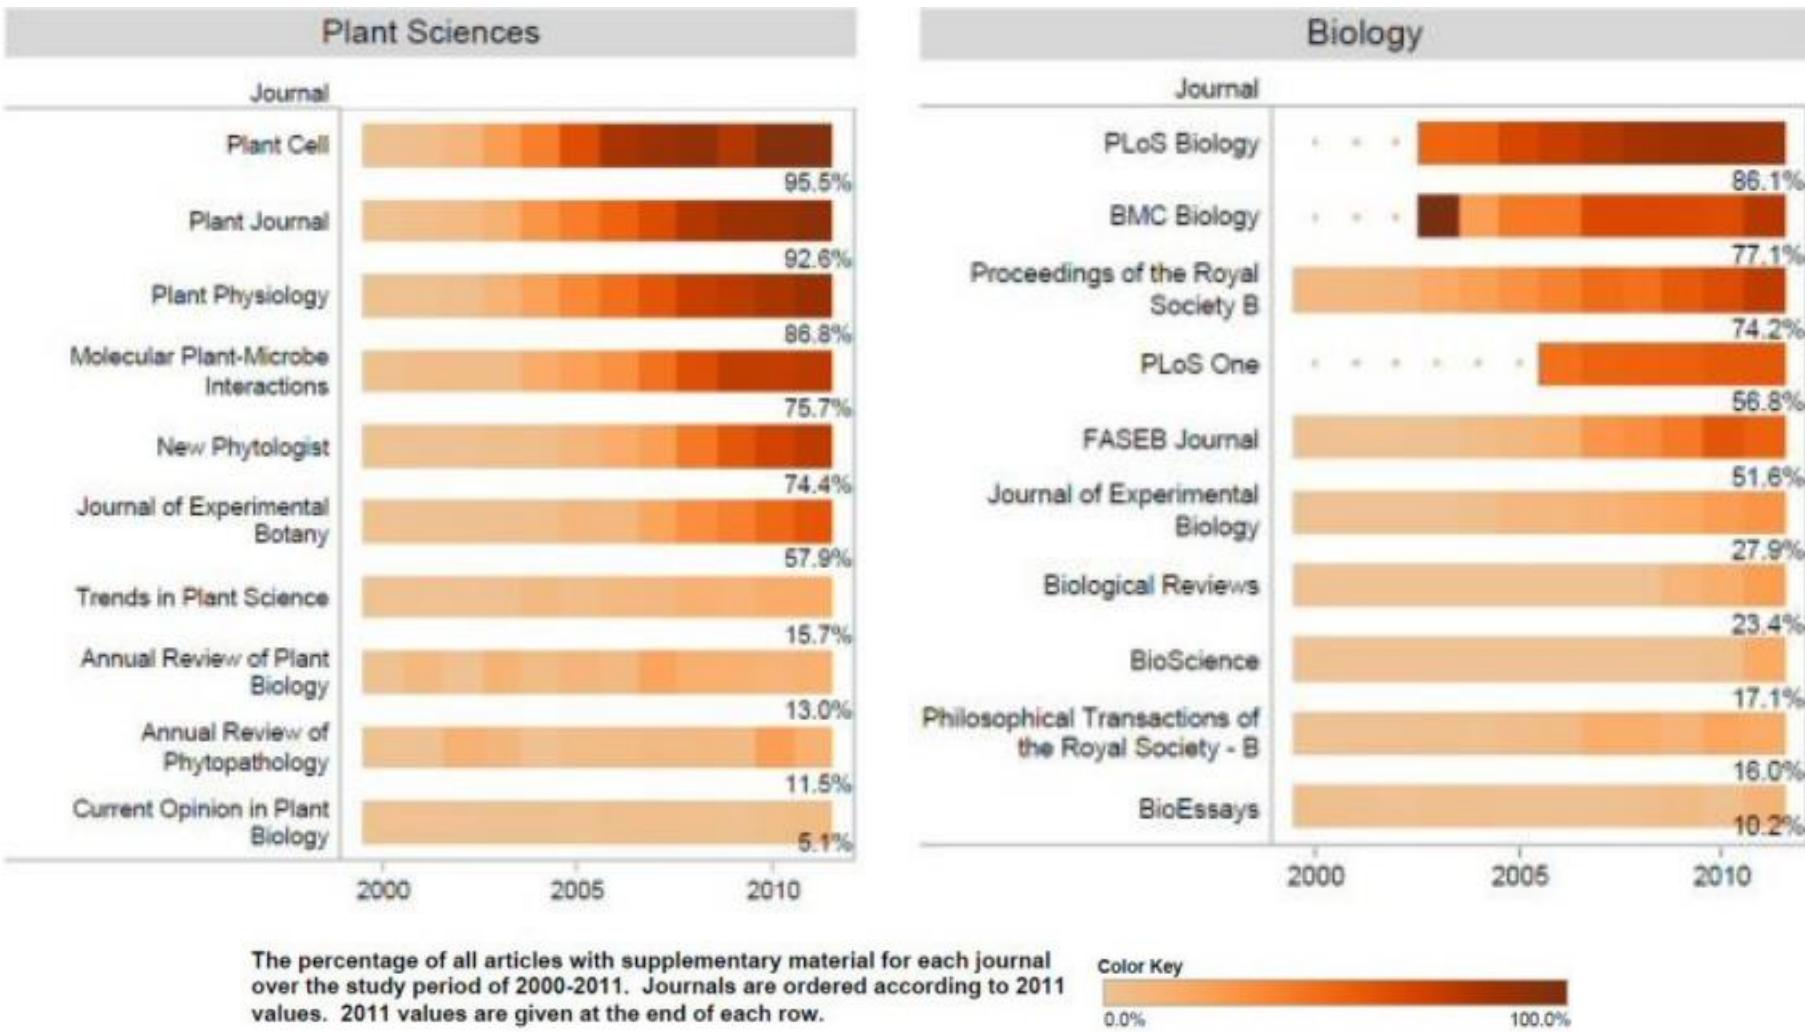

Tendances...

De plus en plus d'articles sont publiés avec du « matériel supplémentaire »

- Libellés variés : Supplemental material, Supplemental data, Auxiliary information, Supporting information, Supplementary content, Additional content ...
- Contenus variés : fichiers audio, vidéo, images à haute résolution, analyses statistiques, explications méthodologiques approfondies ...
- Mis à disposition par les auteurs et/ou à la demande des reviewers

The percentage of articles with supplementary materials by journal.

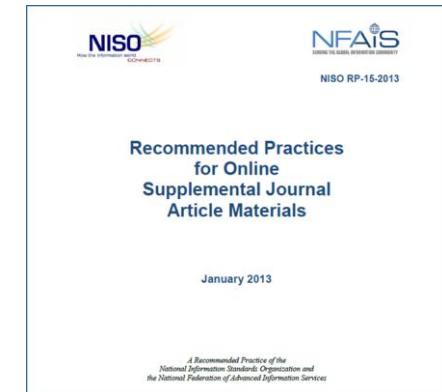

Kenyon, J., & Sprague, N. R. (2014). Trends in the Use of Supplementary Materials in Environmental Science Journals. *Issues in Science and Technology Librarianship*.
<http://dx.doi.org/10.5062/F40Z717Z>

L'édition scientifique s'adapte...

- Les politiques éditoriales intègrent de plus en plus le dépôt et le partage de données mais dans un contexte d'augmentation des volumes des données :
 - imposent parfois des limites de taille aux données fournies comme matériel supplémentaire des articles,
 - externalisent la gestion la curation et le stockage des données en recommandant souvent des entrepôts spécifiques
 - certaines font de la mise à disposition des données une condition préalable à l'acceptation de l'article (Nature ou PLoS)

Guide de bonnes pratiques

- Recommandations pour les éditeurs, les auteurs, les relecteurs et les **documentalistes**

An inherent principle of publication is that others should be able to replicate and build upon the authors' published claims. **A condition of publication in a Nature journal is that authors are required to make materials, data, code, and associated protocols promptly available to readers without undue qualifications.** Any restrictions on the availability of materials or information must be disclosed to the editors at the time of submission. Any restrictions must also be disclosed in the submitted manuscript.

Reporting Checklist For Life Sciences Articles

This checklist is used to ensure good reporting standards and to improve the reproducibility of your research. Please follow the checklist and please read [Reporting Life Sciences Research](#).

► Data deposition

17. Provide accession codes for deposited data.

Data deposition in a public repository is mandatory for:

- a. Protein, DNA and RNA sequences
- b. Macromolecular structures
- c. Crystallographic data for small molecules
- d. Microarray data

Deposition is strongly recommended for many other datasets for which structured public repositories exist; more details on our data policy are available [here](#). We encourage the provision of other source data in supplementary information or in unstructured repositories such as [Figshare](#) and [Dryad](#). We encourage publication of Data Descriptors (see [Scientific Data](#)) to maximize data reuse

18. If computer code was used to generate results that are central to the paper's conclusions, include a statement in the Methods section under "**Code availability**" to indicate whether and how the code can be accessed. Include version information as necessary and any restrictions on availability.

Reported in section

Mandatory deposition	Suitable repositories
Protein sequences	Uniprot
DNA and RNA sequences	Genbank
	DNA DataBank of Japan (DDBJ)
	EMBL Nucleotide Sequence Database (ENA)
DNA and RNA sequencing data	NCBI Trace Archive
	NCBI Sequence Read Archive (SRA)
Genetic polymorphisms	dbSNP
	dbVar
	European Variation Archive (EVA)
Linked genotype and phenotype data	dbGAP
	The European Genome-phenome Archive (EGA)
Macromolecular structure	Worldwide Protein Data Bank (wwPDB)
	Biological Magnetic Resonance Data Bank (BMRB)
	Electron Microscopy Data Bank (EMDB)
Microarray data (must be MIAME compliant)	Gene Expression Omnibus (GEO)
	ArrayExpress
Crystallographic data for small molecules	Cambridge Structural Database

About Scientific Data

Scientific Data is an open-access, peer-reviewed journal for descriptions of scientifically valuable datasets. Our primary article-type, the **Data Descriptor**, is designed to make your data more discoverable, interpretable and reusable.

The Jean Gutierrez spider mite collection

Alain Migeon¹

¹ INRA, UMR 1062 CBGP, F-34988 Montferrier-sur-Lez, France

Corresponding author: Alain Migeon (alain.migeon@supagro.inra.fr)

Academic editor: V. Pešek | Received 28 January 2015 | Accepted 10 March 2015 | Published 23 March 2015

Citation: Migeon A (2015) The Jean Gutierrez spider mite collection. ZooKeys 489: 15–24. doi: 10.3897/zookeys.489.9292
<http://zoobank.org/0719C382-988D-4DCC-8B24-00E65E3C8CC5>

Abstract
The family Tetranychidae (spider mites) currently comprises 1,275 species and represents one of the most important agricultural pest families among the Acari with approximately one hundred pest species, ten of which considered major pests. The dataset presented in this document includes all the identified spider mites composing the Jean Gutierrez Collection hosted at the CBGP (Montferrier-sur-Lez, France), gathered from 1963 to 1999 during his career at the Institut de Recherche pour le Développement (IRD). It consists of 5,262 specimens corresponding to 1,564 occurrences (combination species/host plant/date/location) of 175 species. Most specimens were collected in Madagascar and other islands of the Western Indian Ocean, New Caledonia and other islands of the South Pacific and Papua. The dataset constitutes today the most important one available on Tetranychidae worldwide.

Keywords
Acari, Tetranychidae, World, Madagascar, Western Indian Ocean, New Caledonia, South Pacific, Papua

Data published through GBIF
<http://www.gbif.org/dataset/ac60a288-fcc9-43fc-a7d4-e732b748a981>

Data article

A **data article** is a ‘data publishing’ product, also known as a **‘data descriptor’**, that may appear in a **data journal** or any other journal.

When publishers refer to ‘data publishing’ they usually mean a data article rather than the underlying dataset.

Data articles focus on making data discoverable, interpretable and reusable rather than testing hypotheses or presenting new interpretations (by contrast with traditional journal articles).

Whether linked to a dataset in a separate repository, or submitted in tandem with the data, **the aim of the data article is to provide a formal route to data-sharing.**

//

The length of such articles can vary from micro papers (focused on one table or plot) to very detailed presentation of complex datasets.

Data Paper - Structure

Une structure spécifique parfois minimale

« Lorsque cela est possible, il est recommandé que les contributeurs soient identifiés et les données attribuables, les deux de manière unique, grâce à des identifiants pérennes, non-propriétaires, ouverts et interopérables »

(Extrait des « Guidelines on Open Access to Scientific Publications and Research Data in Horizon 2020- 2013»)

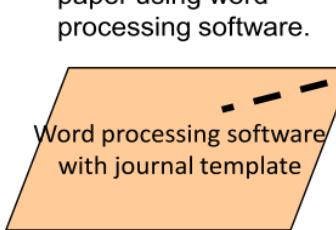

Exemples d'identifiants pérennes

- ORCID pour les contributeurs
- DOI-DataCite pour les identifiants de données
 - Digital Object Identifier-DOI : identifiant pérenne et unique permettant de référencer, citer et fournir un lien stable vers un objet numérique et sa citation.

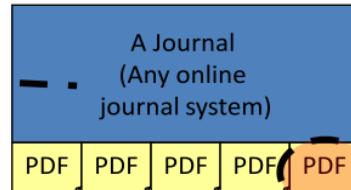

Data Paper - Peer review

The traditional online journal model

1) Author prepares the paper using word processing software.

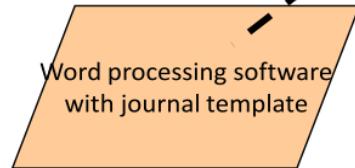

2) Author submits the paper as a PDF/Word file.

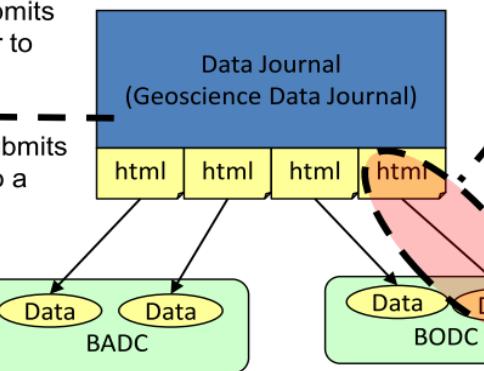

3) Reviewer reviews the PDF file against the journal's acceptance criteria.

Overlay journal model for publishing data

1) Author prepares the data paper using word processing software and the dataset using appropriate tools.

2a) Author submits the data paper to the journal.

2b) Author submits the dataset to a repository.

3) Reviewer reviews the data paper and the dataset it points to against the journals acceptance criteria.

Keywords:

site diversity; radio propagation; fade mitigation techniques

Abstract

Jump to...

The GBS (Global Broadcast Service) dataset is a series of radio attenuation measurements made at three sites in the UK: Chilbolton and Sparsholt, both in southern UK, and Dundee in Scotland. The aim of the experiment was to make long term measurements of the signal strength received from a 20.7 GHz beacon on the US Department of Defense satellite UFO-9 at multiple sites, in order to determine whether the use of site diversity as a fade mitigation technique would be effective. The dataset spans a period of 3 years, from August 2003 to August 2006 with signal attenuation sampled once per second.

Dataset

Jump to...

The GBS (Global Broadcast Service) dataset comes as 3 separate data streams:

• Identifier: doi:10.5285/639A3714-BC74-46A6-9026-64931F355E07

Creator: Science and Technology Facilities Council (STFC), Chilbolton Facility for Atmospheric and Radio Research, [Callaghan, S. A., J. Waight, C. J. Walden, J. Agnew and S. Ventouras].

Title: GBS 20.7 GHz slant path radio propagation measurements, Chilbolton site

Publisher: NERC British Atmospheric Data Centre

Gray, E. A. (2015)

Best practice open data is time consuming
(but still worth the extra effort!)

Emilio M. Bruna recently provided an estimate of the amount of time it took him to prepare & upload open data related to publication to figshare & dryad.

11 & \$90
Hours (for Dryad)

Providing open-source code was the most time consuming part (25.5 hours), and Open Access publication the most expensive (\$600).

<http://brunalab.org/blog/2014/09/04/the-opportunity-cost-of-my-openscience-was-35-hours-690/>

2015**

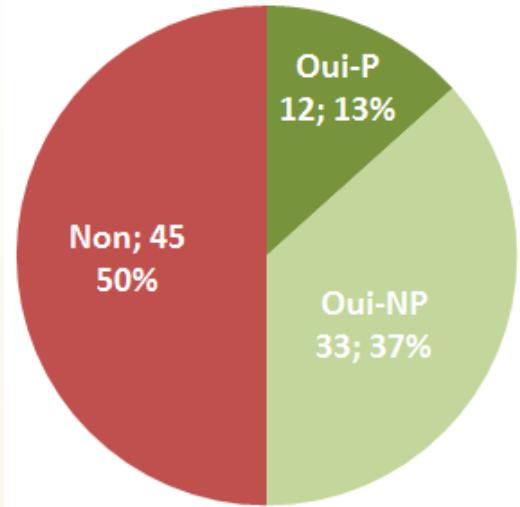

Objectifs

- Compléter une liste de Data Papers « Inra » établie de façon empirique,
- Avoir une vision de l'utilisation actuelle de cette voie de publication et de son intérêt pour les scientifiques
- Échanger sur les difficultés éventuelles rencontrées dans la démarche, les points de vigilance à signaler, les suites éventuelles de ce type de publication (contact, réutilisation des données)

ist@inra

CONNAISSEZ-VOUS LE TYPE DE PUBLICATION DATA PAPER ?

90 réponses analysables

PARMI LES 12 PUBLIANTS

- Aucune difficulté particulière sur le processus éditorial (7/12)
- Difficultés mentionnées
 - Rédaction des métadonnées
 - Choix de l'entrepôt
 - Choix de la licence associée aux données
- Une publication suite à la demande d'un éditeur (dans « Data in Brief » suite à une première soumission à « Journal of Proteomics »)

Parmi les autres répondants

(72%) Connaisseurs
Non Publiants
(80%)
Non connaisseurs

intéressés par les DP soit comme lecteur-utilisateur, soit comme auteur-fournisseur de données, soit pour les 2 raisons

59 personnes (soit 64% des répondants) sont intéressées par la création d'un **service d'accompagnement à la publication de Data Papers**

Intérêt du Data Paper ? Avis partagés

Avis Positifs	Plus mitigés
<ul style="list-style-type: none">• Intéressant pour les unités expérimentales comme voie de valorisation des données produites• Intéressant pour l'aspect réutilisation des données	<ul style="list-style-type: none">• Activité chronophage• Non suffisamment reconnue• Uniquement sous la pression des journaux classiques• Coût des DP et plus largement des articles en OA• Quelle valeur ajoutée du DP ?<ul style="list-style-type: none">– par rapport à un article classique avec des SM et des données expérimentales (« sauf pour l'évaluation : 2 articles au lieu d'un ... »)– Plutôt favorable à un renforcement de la pression pour la mise à disposition des données dans les articles classiques• Aspects juridiques (quelle licence choisir ?)

Publishers vs Journal editors ?

OPEN ACCESS Freely available online

PERSPECTIVE

Recommendations for the Role of Publishers in Access to Data

Jennifer Lin^{1*}, Carly Strasser²

¹ PLOS, San Francisco, California, United States of America, ² California Digital Library, University of California, Oakland, California, United States of America

Box 2. Recommendations for Publishers to Increase Access to Data

1. Establish and enforce a mandatory data availability policy.
2. Contribute to establishing community standards for data management and sharing.
3. Contribute to establishing community standards for data preservation in trusted repositories.
4. Provide formal channels to share data.
5. Work with repositories to streamline data submission.
6. Require appropriate citation to all data associated with a publication—both produced and used.
7. Develop and report indicators that will support data as a first-class scholarly output.
8. Incentivize data sharing by promoting the value of data sharing.

Lin J, Strasser C (2014) Recommendations for the Role of Publishers in Access to Data. PLoS Biol 12(10): e1001975. [10.1371/journal.pbio.1001975](https://doi.org/10.1371/journal.pbio.1001975)

A role for publishers... or for journal editors?

Posted by edreyer on 30 Oct 2014 at 12:28 GMT

I fully agree with the content of this paper. Institutions and journal editors are getting fully aware of the importance of open data as a full scientific production that needs to be made available for reuse, and for quality control as companions to published papers. Unfortunately, I see an important ambiguity in the whole paper that requires some clarification. It is that we never know whether the actors should be the "publishers" (i.e., Elsevier, Springer, Francis and Taylor, Nature publishing group, etc) of the journal editors (i.e., the scientists in charge of the editorial policy of the journal and the warrants of the scientific quality of the published material). I strongly believe that this is the issue, as well as the issue of the ethics in scientific publication, is a central duty of the journal editors and not of the publishers. The procedures for submission and evaluation, the guidelines and rules for access and for the data repositories should be a major concern for the scientists in charge of the editorial policy of the journals, and the publishers should act in support of this policy. Otherwise, we would rapidly run into the classical conflict of interest which is already visible today for the publication of papers: publishers need to publish to make their economic model run. Scientists need to publish relevant and solid stuff including data sets. I will not list again the concerns raised by many scientists about the policy of publishers towards the publication business. This confusion is a real problem for me, and I would urge the authors of the present "recommendations" to clarify this point. Actually, the solution would rely on a tight cooperation between editors (who should take the lead and develop editorial policies for their journals) and the publishers (who may bring an added value due to their expertise in publication techniques and data management systems).

Indeed, the solution is a clear and transparent cooperation between editors and publishers, each with his aims and responsibilities to avoid the conflict of interest that will arise if we do not clarify this matter.

Erwin Dreyer, Editor of Annals of Forest Science, Inra Nancy (France).

Predictions for the (near) future

- Research funding bodies will tighten-up their rules to ensure **immediate post-publication data sharing**. No embargoes, no bullshit.
- If no published data comes from your funded research, it will negatively effect your future chances of funding
- Research institutions will significantly improve **research data management training** for ALL staff & students, old and new alike
- **Good journals will strictly enforce mandatory data sharing.**
Journals that don't will get a bad reputation for irreproducible research
- CC0 for data will become the de facto standard. Everyone will realise that legal protection under **copyright is completely the wrong tool** for ensuring the ethical use of data & appropriate authorship assignment.
